EXPERIENCE

Full-Stack Developer

Aug 2025 – May 2026

University of Cincinnati — Senior Capstone

Cincinnati, OH

- Co-developed KitchenSync with a team of 4, a full-stack household kitchen management app — live at kitchen-sync.org — featuring real-time multi-user inventory tracking, expiration alerts, and recipe discovery matched against pantry contents.
- Implemented onboarding flow with dietary/allergen preferences, AI-powered recipe standardization via GPT-4.1, Spoonacular API integration, and role-based kitchen membership with Supabase Auth and Row Level Security.
- Architected server-side auth guards, Next.js Server Actions, and a full Postgres schema with migrations, indexes, and RLS policies; deployed to Vercel with per-PR preview environments and presented to a panel of 5 industry judges.

Software Developer

May 2024 – Aug 2025

Riverain Technologies

Miamisburg, OH

- Independently designed and deployed 2 full-stack internal web applications in C#/ASP.NET Core, supporting 4 teams across a 45-person company throughout the complete development lifecycle.
- Designed and maintained RESTful APIs with structured logging, validation, and error handling — writing clean, well-documented, maintainable code following established engineering standards.
- Achieved 95% automated unit test coverage using xUnit, practicing TDD principles and ensuring software quality and reliability across iterative sprint deliverables.
- Improved application performance and load states; collaborated cross-functionally in an Agile environment, participating in code reviews and delivering on sprint commitments alongside engineering and business stakeholders.

PROJECTS

BudgetBuddy | *React, FastAPI, PostgreSQL, SQLAlchemy, Tailwind, JWT, Recharts*

May 2026

- Built a full-stack personal finance dashboard with per-user data isolation, JWT authentication, and a FastAPI/PostgreSQL backend; deployed frontend to Vercel and backend to Railway with Alembic-managed migrations.
- Implemented transaction tracking, category budgets, income logging, recurring transactions, savings goals, and interactive spending trend charts — with CSV export and full mobile-responsive design.

YouTube Ad Skipper | *JavaScript (ES6+), Chrome Extension API, Manifest V3*

Mar. 2026

- Built a Chrome extension that auto-skips YouTube ads and mutes the tab during unskippable ads — implemented using a MutationObserver on document.body to detect dynamically injected ad UI without polling or page-load hooks.
- Managed cross-context state persistence via chrome.storage.local across isolated content script and popup execution contexts; handled multiple YouTube A/B-tested skip button selectors for broad compatibility.

SpaceX Informational Website | *React, Node.js, Express, MongoDB, JWT*

Aug. 2025

- Built a full-stack web application with a React frontend and Node.js/Express backend, integrating a live third-party REST API and JWT-based authentication; deployed to cloud infrastructure on Render.
- Configured deployment pipelines, managed environment variables, and debugged cross-service data flow issues across distributed frontend and backend services.

TECHNICAL SKILLS

Languages: C#, JavaScript (ES6+), TypeScript, Python, SQL

Backend & APIs: ASP.NET Core, FastAPI, Node.js, Express, RESTful API design, TDD, xUnit

Frontend: React, Next.js, HTML5, CSS3, Tailwind

Cloud & DevOps: AWS (EC2), Azure, Vercel, Railway, Docker fundamentals, Git, CI/CD concepts, Agile/Scrum

Databases: PostgreSQL, MongoDB, MySQL

AI Tools: Claude, GitHub Copilot, ChatGPT — actively used to optimize development workflows and productivity

EDUCATION

University of Cincinnati

Cincinnati, OH

B.S. Information Technology, Software Application Development

May 2026
